

System is stopped until bush button get high then red led will be on for 15 minutes by making time now in variable then check if millis – the begin time less than 15 minutes if is true the led will be on until the time be more than 15 minutes .

And every 2 minutes the green led will flash for 5 second by making the begin time in variable and equal to the now time then check if millis – the begin time less than 5 second if it true it will ne flash

And after 5 minutes and 8 minutes the white led will be flashed by the same way of green led
